## RETRACTABLE AWNINGS

### >>> The TOTAL ECLIPSE RETRACTABLE AWNING

The Polar Shades Total Eclipse Retractable Awning provides the ultimate in strength and performance with projections up to 16 feet 6 inches.

If you need a large projection, you need the Total Eclipse! Unlike other systems, the Total Eclipse uses more substantial components to ensure the state of the art performance of our 13', 14'-9", and 16'-6" projections. We start with a 50mm steel torsion bar. That's 25% larger than other systems. The arms and arm assembly are larger in extrusion profiles and cast parts. The installation brackets are larger for added strength. The front bar has a larger exterior dimension for the stability required in a unit this size. The casting in the elbow is larger to transfer more tension to the fabric.

The belt is also larger, nine larger cables for a larger belt. Large projections are a serious business and you need a serious awning. Other systems use the same product at 10 feet and 11-6 as they use for their 13 foot projection. NOT ECLIPSE! Don't settle.

If you need 13 foot coverage or more, you need the Total Eclipse. The Total Eclipse is engineered and designed to project an incredible 16 feet 6 inches! Whether you need 13', 14'-9" or 16'-6" there is no other choice when it comes to large projection awnings... Choose Total Eclipse
